this edition is a reprint of the second edition published in 2000 by Brooks Cole and then Cengage Learning. Principles of Biostatistics is aimed at students in the biological and health sciences who wish to learn modern research methods. It is based on a required course offered at the Harvard School of Public Health. In addition to these graduate students, many health professionals from the Harvard Medical Area attend as well. The book is divided into three parts. The first five chapters deal with collections of numbers and ways in which to summarize, explore, and explain them. The next two chapters focus on probability and introduce the tools needed for the subsequent investigation of uncertainty. It is only in the eighth chapter and thereafter that the authors distinguish between populations and samples and begin to investigate the inherent variability introduced by sampling. Thus, progressing to inference postpones the slightly more difficult concepts until a solid foundation has been established, making it easier for the reader to comprehend them. All supplements, including a manual for students with solutions for odd-numbered exercises, a manual for instructors with solutions to all exercises, and selected data sets, are available at crcpress.com. 9781138593145. Marcello Pagano is professor of statistical computing in the department of biostatistics at the Harvard School of Public Health. His research in biostatistics is on computer-intensive inference and surveillance methods that involve screening methodologies with their associated laboratory tests and in obtaining more accurate testing results that use existing technologies. Kimberlee Gauvreau is associate professor in the department of biostatistics and associate professor of pediatrics at Harvard Medical School. Dr. Gauvreau's research focuses on biostatistical issues arising in the field of pediatric cardiology. She also works on the development and validation of methods of adjustment for case mix complexity.

Principles of Biostatistics, Third Edition, is a concepts-based introduction to statistical procedures that prepares public health, medical, and life sciences students to conduct and evaluate research with an engaging writing style and helpful graphics. The emphasis is on concepts over formulas or rote memorization. Throughout the book, the authors use practical, interesting examples with real data to bring the material to life. Thoroughly revised and updated, this third edition includes a new chapter introducing the basic principles of study design, as well as new sections on sample size calculations for two-sample tests on means and proportions, the Kruskal-Wallis test, and the Cox proportional hazards model. Key features include a new chapter on the basic principles of study design, additional review exercises, and datasets for Stata and R. Code are available on the book's website.
